OVELTIES. HUBBARD JOHN

OUR MR R. A. COFFEE, OF THE FIRM OF COLE & COFFEE,

IS not a baby in the mercantile world, having gone into business on his own account in 1870, when quite a boy. To show you he is a fair dealer he has never gotten RICH or FAILED in business. His motto is—"Buy RIGHT and DIVIDE profits

We are now receiving one of the BEST and LARGEST selected stocks of SHOES ever brought to this market, bought direct from the Factories. We also have a beautiful line of DRY GOODS and NOTIONS, HATS, CAPS, DELPH, TIN-WARE and CLOTHING. These goods are all marked in plain figures, as low as the same goods can be bought in any retail store in the U.S. When you see the figures you know the price. ABSOLUTELY ONE PRICE TO ALL.

In order to divide profits, we will fill a case with presents, worth from 5c. to 50c. To every 100 bundles there will be one containing a \$5 00 bill.

For every dellar's worth of Shees or Dry Goods you have you are entitled to a present.

For every dollar's worth of Shoes or Dry Goods you buy, you are entitled to a pres-\$10.00 gives you 10 presents and 10 chances at the \$5.00 bill. We will forfeit \$50.00 if there is not a \$5 00 bill for every 100 presents in the case each day, if the same

has not been drawn out that day.

All we ask is a look at our goods and prices, to say nothing at all of the 15 to 25 per cent, we give you back in presents.

September 12 is our opening day for the Fall Season.

COLE & COFFEE.

Advertisements are printed on paper used for doing up packages by the act of unrolling paper from the reel. the type being set in a roller resting on the paper roll, and inked by another roller lying above the type roll.

A Massachusetts man places a number of horizontal bars overhead in an elevator, hung on springs at each end, which are intended to be grabbed by the passengers if the car falls, the springs breaking the force of the fall. The latest bicycle support consists of an arm, one end of which clamps onto the lower brace of the frame in front of the cranks, the other end use it lies parallel with the lower

A bicycle crate which folds up has recently been patented. It is made of not over five inches high when folded. is claimed that it can be set up and a wheel packed in it in five minutes. To reduce the size of rings they are

side of the ring. To stop leaks in vessels an Ohio to Prolong Life" gives over twenty pages to tables of analyses of foods. placed at the side of the vessel on which is wound a heavy fabric, one they give, fruits and nuts have the end of which has a hook for fastening it to the keel of the vessel, the other end being drawn tight by winding up

A new elevator consists of an endless chain having steps at short distances from each other, running up and down an inclined plane. A person wishing to ascend or descend grasps a rope at the side to steady himself and steps upon the projecting step

as it passes him. A late invention, enables the motorman to turn a switch by setting a lever on the car, which places a hooked rod in position to engage the end of a lever attached to the switch, the forward motion of the car pulling the lever forward and down so as to release the hook at the proper place.

Invalids are now given a bath without the necessity of removing them from the bed. The device consists of a canvas sheet fastened loosely to a frame over the bed in which the patient is placed. The centre, being lower than the edges, it holds all the

water necessary for the bath. Rain is prevented from entering buggy by means of a curtain fastened to the front of the box, reaching up to the wagon top, and around the sides thus enclosing the entire front. A number of glasses are placed in the

front and sides of the curtain and holes for the reins to pass through. A new medicine cabinet indicates the time for giving each dose to the patient, also the kind and quantity of medicine. The bottles are placed in a rack with convenient drawers for pills and powders, and a bracket to hold spoons. A clock and extra dial with movable hands are also placed in

the cabinet. Fanning is made easy by a new in vention which consists of a small pair of bellows, intended to rest in the lap of the operator, with one side left open to allow the air to escape. Squeezing the handle forces the air out, and the breeze can be directed in the proper place by turning the opening in the direction desired.

A new bicycle tire has on its inter ior a number of rubber rings fastened to a strip of metal running through their centre, the whole being surrounded by a flexible cover. Between the two thicknesses on the running side of the tire are placed short strips of metal held in place by a textile strip cemented over them. Another recent patent in tires consists of filling the favors digestion. Most of the vegeinside with cork, as well as inflating it with air.

The tornado-proof house is some thing novel at least. It revolves on a pivot, and is provided with a weather vane, fixed so that the house must always face the wind. The most essential feature of the contrivance. strange to relate, is a cannon, which is loaded with an explosive bomb, intended to be fired into the cyclone to scatter its energy. The inventor says | eye, and Holemans 1,022. First-class he got the idea from the practice of telescopes of to-day reveal over 100, firing guns at waterspouts at sea. on the axle. The tricycle is also provided with pedals, which it is necessary to use to start the engine, but after the first few turns the engine furnishes all the power necessary. The total weight of the tricycle is 100 pounds, and it can travel up grades of led to manufacture them.

The advantages claim pedals, much steeper grades can be

How to Prolong Life.

As the question of food enters s largely into the subject of long and healthy life, some suggestions seem called for in regard to what may be considered most suitable for persons of sixty and upward. It has been urged that a return to nature, or to this. the food which primitive man nourished his body upon, would be the right thing to do. Fruits and nuts appear to have been his dietary, and not flesh and vegetables. Oranges, apples, grapes, figs, bananas, dates, prunes peaches, and, in fact, all kinds of sweet fruits and tomatoes are good, because they are deficient in nitrogen and free from the earth salts of other kinds of food. Starchy foods are more difficult to digest than fruits and meats. Nuts, such as almonds, Brazil nuts, filberts, walnuts, hickory nuts, and similar products abound in nourishment and furnish the necessary heat for the body. Eggs, fish, cheese, milk, especially buttermilk, and poultry of all kinds supply variety. Starch foods are clogging to the system, producing constipation. Invalids are always put upon toasted bread, because the heat acting upon the starchy portions turns it into dextrine; this being changed to glucose by the action of the stomach, is easily disposed of Glucose is the sugar of nature as found in ripe sweet apples and in honey.

Tea, coffee, wine, and beer, as well as all alcoholic drinks, are to be taken card case. The cards are printed on in extreme moderation, as they are drink. As every one knows, if you eat slowly, you do not need to drink at all. And that is one of the great a street car from slipping when the brake is applied. His idea is to make distilled by nature in the fruit, which the wheels act as magnets and grip the is also aperient and cooling to the blood, already too much heated by starchy foods. Exclusive vegetarianism seems to be injurious to the human system. But people who advocate a diet of fruits and nuts, omitting starch foods and too much bread, are not vegetarians; for they get the heat and strength necessary for health from nuts, lean meats, lamb, veal, and young animals whose systems have not had time to get clogged with the objectionable earth salts. If fresh fruit cannot be obtained at all times, dried figs, raisins, and dates can be steeped in hot water and thus brought to an almost fresh condition. As for whole meal or graham bread, the merit that it may have is offset by its irritating effects upon the stomach and intestines, produced by the indigestible bran particles. Sugar furnished by nature in the form of glucose is ready human body, if treated naturally, does

for assimilation; on the contrary, resting on the ground. While not in sugar from cane, beets, maple, and sorghum is insoluble by the system until it has undergone the process o digestion, both in the stomach and the intestines. Now, as salt, pepper, and wood and steel, and occupies a space | all irritants, as well as stimulants, are goads to the nervous system, the not require them. Animal instinct indicates the law of nature. Since placed inside a steel tube, which is Cuvier's time zoologists have been small at one end, and gradually in- telling us that man belongs to the creases in size, and pressed toward a manlike apes, which live entirely on small end by means of a rod, thus nuts and fruits, never cating other animals or cereals. placing a pressure all around the out-Dr. DeLacy Evans in his book "How

As compared with the nourishment least proportion of earthly salts. An imal flesh comes next, then vegetables, and fourth in rank we have cereals and pulses, which are shown to have the largest amount of the earthly matters. From the analysis we see that fruits as distinct from vegetables have the least amount of earth salts. We also notice that they are to a great extent free from the oxidized albumens -glutinous and fibrinous substances and many of them contain acids-

citric, tartaric, malic, etc.-which when taken into the system act directly upon the blood by increasing its solubility, by thinning it; the process of circulation is more easily carried on and the blood flows more easily in the capillaries-which become lessened in caliber as age advancesthan it would if of a thicker nature. These acids lower the temperature of the body and thus prevent the wasting process of oxidation or combustion in the system. Rice is easily digested and an excellent food, except that it abounds in earth salts. Fruits are not only digested in the first stomach but they have a large part of their nourishment already in a condition to be absorbed and assimilated as soon as eaten. The food elements in bread and cereals have to undergo a process of digestion in the stomach, and then

of lean meats and fruits. Overwork is not expected from a avoided. Distilled water should always be used both for drinking and cooking, if it can be obtained. Rain water, if filtered, is perhaps the next best, though not free from objections. Grapes, say numerous authorities, act very much like mineral waters on the human system. But they are better. human system. But they are better, because at the same time they nourish the body. Nutrition is increased secretion promoted, action of the liver, kidneys, and other excretory organs improved, and the phosphoric acid, of which they cantain a considerable amount acts favorably on all the bodily functions, especially on Board of Directors Y. M. C. A. of Ander the brair. As is well known, the sugar of the grape requires no digestion, but is taken almost at once into the blood. Dextrine from the grape promotes the secretion of pepsin and thus

digestion, but that digestion is best which does not need them .- Public Opinion. - The first savings bank in the United States was called "The Savings Fund Society of Philadelphia.'

000,000. - It is proposed to send 40,000 un married women from Eastern Canada to British Columbia, for the purpose of supplying the demand for wives.
